

Artificial Intelligence (AI) is the simulation of human intelligence in machines that are programmed to think and learn like humans. Machine Learning is a subset of AI that enables systems to automatically learn and improve from experience using data. Supervised learning is a machine learning approach where models are trained using labeled datasets to make accurate predictions. Unsupervised learning focuses on discovering hidden patterns and structures in unlabeled data. Flashcards are an effective learning tool that enhance memory and understanding through active recall and spaced repetition.
